RIDUTTORI PER PROVETTE - NESTING SAMPLE CUP

RIDUTTORI 1 ml. per provette 13x30 Ø 13 NESTING SAMPLE CUP 1 ml. for test tubes 13x30 Ø 13	MH5420	10.000 pz.
RIDUTTORI 2 ml. per provette 16x30 Ø 16 NESTING SAMPLE CUP 2 ml. for test tubes 16x30 Ø 16	MH5430	8000 pz.

I riduttori per provette sono utilizzati nei casi in cui si ha poco campione da analizzare. Permettono l'innalzamento del fondo della provetta e consentono l'aspirazione con l'ago dello strumento automatico. Il campione da analizzare viene trasferito dalla provetta originale al riduttore e quindi quest'ultimo viene inserito all'interno della provetta. Ideali per essere utilizzati nelle provette portacampione degli analizzatori comunemente utilizzati come Dade Dimension®, Hitachi® 747, Kodak Ektachem® 700 Series e similari.

The nesting sample cups are used when there is a small volume of sample in order to allow tube rising and to permit the easy aspiration by the instrument's needle. To use, simply transfer the sample from the original collection tube into the nesting cup. Then, place the nesting cup inside the original collection tube. Ideal for use on directtube sampling machines as Dade Dimension®, Hitachi® 747, Kodak Ektachem® 700 Series and similar.
