

# PROCALCITONIN

rapid test whole blood, serum, and plasma samples  
laboratory & POCT

## LATERAL FLOW

# P R O C A L C I T O N I N ( P C T )

New PCT Rapid Tests are a lateral flow chromatographic immunoassay for the qualitative and quantitative detection of Procalcitonin (PCT) in whole blood, serum, and plasma samples. These tests are a tool to assist in the diagnosis and severity of sepsis caused by suspected bacterial infections.

**PROCALCITONIN**  
RAID TEST LATERAL FLOW  
Fluorescence immunoassay

Quantitative immunoassay PCT Test  
on LF QUANTI® READER  
POCT analyzer

Qualitative detection of PCT in  
human's whole blood. POCT.  
cut-off 1 ng/ml

Procalcitonin quantitative detection  
in human serum or plasma

### ORDERING INFORMATION:

Product Code  
CPC-R402  
CPC-402  
MF-27

Product's Description  
PCT Quant. LF QUANTI® READER Laboratory & POC Serum-Plasma-Whole Blood  
PCT Laboratory & POC qualitative Serum-Plasma-Whole Blood  
PCT FLUORECARE® Laboratory quantitative Serum-Plasma

Packaging  
10 test
